

Aram Mamian

Project, Product & Delivery Manager

I've spent nine years delivering AI, automation, and software projects, from business case and functional analysis to go-live. Since founding **Stratae** in 2020, I've recruited and led remote product teams and run an enterprise client's automation practice that cut manual processing time by 60%+. I'm also technical: I built 1fifty, an AI-powered mobile CRM since spun out as its own company, by directing AI coding agents through written specs and reviews.

📄 Experience

Founder

📅 February 2020 — Present

Stratae

Mechelen

Founded a software development, project management, and delivery company that pairs client missions with in-house products.

Product & Engineering Lead

📅 2022 — Present

- Own scope, architecture, and delivery for the products detailed under Current Projects below
- Recruited, led, and mentored the remote teams of developers and analysts behind Paymen and Balas
- Shape 1fifty's business case alongside the build: pricing plans and a three-year financial model with an LTV/CAC guardrail
- Incubated 1fifty in-house until its 2026 spin-out as its own company, 1fifty BV
- Partnered with an ophthalmologist on Manae, with Stratae BV acting as its eHealth software integrator

Automation Lead

📅 2020 — 2024

Partena Professional

Led the client's automation practice, continuing the relationship built while running its RPA Center of Excellence in 2019.

- Drove RPA discovery, delivery, and operations using Blue Prism, reducing manual processing time by 60%+
- Developed custom applications and scripts in C#, VB, and Python for enterprise automation
- Built low-code solutions with Retool and Power Automate, accelerating internal tool delivery
- Implemented chatbot solutions (Inbenta, Crisp, Intercom), improving customer response times
- Wrote complex SQL queries serving multiple teams and stakeholders
- Established company-wide product documentation systems, improving knowledge sharing

Automation Project Manager

📅 January 2019 — January 2020

BrightKnight (Belfius Studio)

Brussels

- Led the complete RPA Center of Excellence for Partena Professional
- Collaborated directly with internal budget and product owners across business units
- Engaged in sales initiatives with prospective clients
- Mentored project managers and consultants on delivery excellence and technical best practices

Technology Consultant

📅 May 2017 — January 2019

Accenture

Brussels

- Delivered end-to-end Natural Language Processing (NLP) projects for Belfius bank
- Implemented Robotic Process Automation (RPA) solutions at enterprise scale
- Bridged technical solutions with business requirements across multiple stakeholders

Current Projects

Since 2022, through Stratae, I've been developing digital products end-to-end—from product discovery and functional analysis to UI/UX collaboration, architecture, and full-stack development. Paymen and Balas were built with remote teams; on 1fifty and Manae, I'm the sole engineer, working with AI coding agents.

1fifty

1fifty.ai 

A mobile-first personal CRM that turns business cards and shared profiles into AI-enriched contacts, with an agentic chat and voice assistant. Spun out of Stratae as 1fifty BV in 2026, it is preparing to launch on the App Store and Google Play in 170+ regions and 12 languages.

- Built four deployables in one monorepo: an iOS/Android app, a Bun/Hono/tRPC API, an internal back office, and the marketing-site platform
- As sole engineer, directed parallel Claude Code agents through a written spec → plan → review process, with ~350 guard test suites enforcing architecture and security rules
- Developed an agentic CRM assistant (35 tools, three Claude tiers) with per-turn time, tool-call, and spend ceilings; edits and deletes wait for user confirmation
- Engineered an interruptible, hands-free voice mode: a custom Swift/Kotlin duplex audio engine with echo cancellation, and sentence-by-sentence speech while the answer still streams
- Architected offline-first sync: a SQLite cache, a custom versioned delta protocol (cursors, tombstones), Supabase Realtime push, and a durable write outbox
- Designed server-authoritative billing: RevenueCat in-app purchases, 12 usage types priced from actual provider cost, 43-currency credit packs, and a fleet-wide spend circuit breaker
- Implemented tenant isolation and GDPR controls: Row-Level Security on all 67 tables, zero-data-retention AI, PII redaction, and self-service data export and erasure
- Automated business-card capture: a multimodal LLM reads front and back photos and returns strict-schema JSON, with idempotent billing so a retry never charges twice

Manae

A practice-management web app for Belgian ophthalmology practices, built with a partner ophthalmologist on a specialty-agnostic core. It reached a pre-pilot MVP (v0.14) and has been paused since August 2026 pending eHealth authorization.

- Built the practice app in English, French, and Dutch: patient files, consultations, prescriptions, scheduling, a live waiting room, staff chat with video calls, and online booking requests
- Designed a specialty-agnostic core: clinical data lives in versioned, schema-validated JSONB payloads plus per-specialty configuration, starting with ophthalmology (refraction, IOP, slit lamp, fundus)
- Built e-prescribing to Recip-e's specs, stub-tested pending certification: SAMv2-coded medication, a duplicate-blocking ledger, the printed patient proof, and a Java KMEHR serializer
- Led the eHealth onboarding: registered the Recip-e program ID (acceptance access opened), applied for the eHealth acceptance certificate, and clarified RIZIV and MyCareNet requirements
- Built layered medical-data privacy: row-level security on all 73 tables, per-dossier access requiring a recorded purpose, a trigger-enforced append-only audit log, and envelope-encrypted national IDs
- Designed EU-sovereign hosting for patient data on Clever Cloud with Scaleway-managed keys, and proved the database stack and access gate on a Clever test instance with synthetic data

Paymen

A modern platform streamlining invoice management from capture to payment processing, featuring intelligent document parsing and workflow automation.

- End-to-end invoice lifecycle management from capture to payment
- Chromium-based browser extension built with Svelte
- Python-powered email backend for automated document ingestion
- Led architecture decisions and served as lead full-stack developer

Balas

A mobile application for private social circles that centralises key social features including messaging, feeds, location sharing, calendar integration, and budget management.

- Real-time messaging and activity feeds for private groups
- Integrated location sharing and calendar coordination
- Collaborative budget management for group expenses
- Recruited and led a team of remote full-stack developers

🔑 Core Competencies

- Project Management
- Product Discovery
- Stakeholder Management
- Team Leadership
- Agile Methodologies
- Resource Management
- Business Analysis
- Functional Analysis
- Requirements Gathering
- Cross-functional Collaboration
- Process Automation
- RPA Center of Excellence
- Solution Architecture
- Technical Mentoring
- Full-Stack Development
- Mobile App Development
